

Igor Pasternak founded Aeros over 25 years ago, building his business from the ground up. Known for pushing the boundaries of technology, Mr. Pasternak sets no limits to his creativity and execution of grand ideas. As the company grew, he inspired many talented people to join Aeros to become a part of his lifelong vision. Also as Aeros` Chief Engineer, he is the creator of the Aeroscraft, a new type of cargo air vehicle that encompasses true vertical take-off and landing capability at maximum payload, while operating independently of external ballast.

He is also one of the worlds leading experts in the design and construction of the FAA Certified Airships, in which the company continues to participate in all major U.S. Government programs related to Lighter Than Air (LTA) Aircrafts.

Guided by his vision, Aeros has produced a more efficient air transportation vehicle with the Aeroscraft, a vehicle that will revolutionize military and commercial cargo transport. Mr. Pasternak is also focused on utilizing the Aeroscraft to streamline logistics for the Wind Energy Industry to help increase power generation through the production, transportation and installation of larger wind turbine components.

Mr. Pasternak has been twice honored with the Small Business Person of the Year Award. Through his leadership, Aeros has not only grown to become a global provider in advanced transportation solutions, but is equipped to take logistics to its full potential with the Aeroscraft.
